CONNECTIONS WITH CERTAIN FACILITIES AND/OR EQUIPMENT OF OTHERS

15.2 Customer-Provided Terminal Equipment (Cont'd)

15.2.2 Voice Transmitting and/or Receiving Terminal Equipment (Cont'd)

b. Acoustic, Inductive Connections

- (1) Customer-provided voice transmitting and/or receiving terminal equipment may be acoustically or inductively connected with Company facilities for telecommunications services provided the acoustic or inductive connection be made externally to a company network control signaling unit.
- (2) To protect the telecommunications network and the services furnished to the public by the Company from harmful; effects, the customer-provided voice transmitting equipment must comply with the following minimum network protection criteria:
  - a. To prevent excessive noise and crosstalk in the network, it is necessary that the power of the Signal which is applied by the customer-provided equipment to the network control signaling unit located on the customer's premises be limited so that the signal power at the output of the network Control signaling unit (i.e., at the input to the company line) does not exceed 9db below one milliwatt when averaged over any three-second interval.
  - b. To protect other services it is necessary that the signal which is applied by the customer-provided equipment to the network control signaling unit located on the customer's premises meet the following limits at the output of the network control signaling unit (i.e., at the input to the Company line).
    - (i) The power band from 3,995 Hertz to 4,005 Hertz shall be at least 18db below the power of the signal as specified in 15.2.2(b)(2)(a) above.
    - (ii) The power in the band from 4,000 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.
    - (iii) The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.
    - (iv) The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.
    - (v) The power in the band from 40,000 Hertz shall not exceed 50db below one milliwatt.
