TARIFF FORMAT SHEET

- A. Page Numbering. Page numbers appear in the upper-right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added, the page appears as a decimal. For example, a new page added between pages 24 and 25 would be 24.1.

- B. Page Revision Numbers. Revision numbers also appear in the upper-right corner of the page. These numbers are used to determine the most current page version on file with the Public Service Commission of South Carolina. For example, the 4th revised Page 24 cancels the third revised Page 24. Because of deferrals, notice periods etc., the most current page number on file with the Commission is not always the tariff page in effect. Subscriber should consult the check page for the page currently in effect.

- C. Paragraph Numbering Sequence. There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.
 - 2.
 - 2.1.
 - 2.1.1.
 - 2. 1. 1.A.
 - 2.1. 1. A. 1.
 - 2.1. 1. A. 1. (a)
 - 2.1.1.A.1.(a).I
 - 2.1. 1 A. 1 (a). 1. (i)
 - 2.1. 1 .A. 1.(a).1 (i) (1)

- D. Check List of Effective Pages. When a tariff filing is made with the Commission, an updated Check List of Effective Pages ("Check List") accompanies the tariff filing. The Check List lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the Check List is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on the Check List if these are the only changes made to it (i.e., the format, etc.). The subscriber should refer to the latest Check List to find out if a particular page is the most current page on file with the Commission.

SECTION 3 - DESCRIPTION OF SERVICE

3.1 Timing of Calls

3.1.1 Chargeable Time

The Customer's long distance usage charge is based on the actual usage of The Company's network. Usage begins when the called party picks up the receiver. When the called party picks up is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. When software answer supervision is employed, up to 60 seconds of ringing is allowed before it is billed as usage of the network. A call is terminated when the calling party hangs up thereby releasing the network connection. If the called party hangs up but the calling party does not, chargeable time ends when the network connection is released or by automatic timing equipment in the network. There will be no charges for incomplete calls.

3.1.2 Billing Increments

The minimum call duration and initial billing period is 6 seconds for all intrastate direct dialed calls unless otherwise specified by this tariff. Any additional period is measured and rounded to the next higher 6 second increment unless otherwise specified by this tariff.

3.1.3 Rounding

All calls will be rounded to the fourth decimal place amount of a call charge.

INTEREXCHANGE TELECOMMUNICATIONS

SECTION 3 - DESCRIPTION OF SERVICE (CONT'D)3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The Company uses the rate centers and associated vertical and horizontal coordinates that are produced by Telcordia in their NPA-NXX V & H Coordinates Tape and Bell's NECA Tariff No. 4

FORMULA:
$$2 \sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$

EXAMPLE: Distance between Miami and New York City -

<u>VH</u>	
Miami	8,351 529
New York	<u>4,997</u> <u>1,406</u>
Difference	3,354 -879

Square and add: $11,249,316 + 772,641 = 12,021,96$

Divide by 10 and round: $12,021,597 / 10 = 1,202,195.70$
 $= 1,202,196$

Take square root and round: $1,202,196 = 1,096.4$
 $= 1,097 \text{ miles}$

3.3 Minimum Call Completion Rate

A Customer can expect a call completion rate (number of calls completed / number of calls attempted) of not less than 95% during peak use periods for all services ("1+" dialing).
